

CODEBOOK FOR CSSCD FORM NPC  
NEUROPSYCHOLOGICAL DATA FORM: CHILD COMPONENT  
CSSCD INFANT COHORT PATIENTS

---

---

A. Collection Information:

**Form NPC (Neuropsychological Data Form: Child Component)** was completed at the time of each neuropsychological evaluation during Phases 2 and 3. Beginning at Phase 2 entry in children  $\geq 6$  years of age at the time of Phase 2 enrollment (or at age 6 in children  $< 6$  years of age at the time of Phase 2 enrollment), CSSCD were to be scheduled every two years for neuropsychological evaluation. Evaluations were to be conducted within six weeks of a CSSCD Magnetic Resonance Imaging (MRI) study (See Section 2.1). Neuropsychological tests to be administered at each assessment point included:

1. Purdue Pegboard (SPA version)
2. Wechsler Intelligence Scale for Children-Revised Edition (WISC-R)  
(**during Phase 2** – i.e., before 4/94); Ages 6-15.11

Wechsler Intelligence Scale for Children-Third Edition (WISC-III)  
(**during Phase 3** – i.e., after 3/94); Ages 6-15.11

OR

Wechsler Adult Intelligence Scale, Revised (WAIS-R) **during Phase 3**; Ages 16-adult

3. Woodcock-Johnson Revised, Tests of Achievement (WJ-R):
  - Broad Reading Cluster: (22) Letter-Word and (23) Passage Comprehension; (31) Word Attack is optional.
  - Broad Math: (24) Calculation and (25) Applied Problems
4. Woodcock-Johnson, Revised, Tests of Cognitive Ability (**Phase 3 only**)
  - Processing Speed Cluster: Visual Matching (3), Cross Out (10)
  - Short Term Memory Cluster: Memory for Sentences (2), Memory for Words (9)
  - Analysis/Synthesis (7)
  - Spatial Relations (19)
5. Benton Tactile Form Perception Test
6. Beery Developmental Test of Visual-Motor Integration (VMI), Third Revision (**Phase 3 only**)

**Administration Instructions:**

- A. Study Forms (All study forms were to be completed in black ink or dark pencil,

**CODEBOOK FOR CSSCD FORM NPC**  
**NEUROPSYCHOLOGICAL DATA FORM: CHILD COMPONENT**  
CSSCD INFANT COHORT PATIENTS

---

so that photocopying for quality control scoring would be clear and readable.)

1. Exclusion Criteria for Neuropsychological Evaluation (NEX)

The NEX was to be completed prior to evaluation by the CSSCD Data Coordinator on the day before the evaluation on the basis of parent report and/or medical chart review. If parent report was suspect, the medical chart was to be reviewed. If any of the questions on the NEX was answered "YES", then the patient was rescheduled for the evaluation.

2. Neuropsychological Data Form: Child Component (NPC)

The NPC is the scoring sheet for the neuropsychological tests administered by the pediatric neuropsychologist. Specific information regarding the scores that should have been entered for each test is provided in section B1-6 below.

3. Accuracy of Assessment Form (ACC) (See Section 2.4)

The ACC was to be completed by the neuropsychologist at the conclusion of each evaluation. As long as the children met the inclusion criteria for CSSCD Phase 2 enrollment, attempts were made to administer all tests to all subjects, regardless of difficulties or disabilities present in the child (e.g., hearing problems, hemiparesis). However, all factors influencing the evaluation were to be listed on the ACC form at the conclusion of the testing.

B. Standardized Tests

1. Purdue Pegboard (SPA version) (A measure of fine motor speed and coordination)

The child evaluation was to begin with the administration of the Purdue Pegboard. There are two versions of this test available, one published by SPA and the other by Layfayette Instrument Company. In this study, the SRA version is to be used.

Tiffin, J. (1987). Purdue Pegboard. Chicago:Science Research Associates.

Ordering Information:  
London House  
SPA Industrial Testing  
9701 West Higgins Road  
Rosemont, IL 60018

Before administering the Purdue, a sample of the child's handwriting (e.g., have the child write his/her name) was obtained for the purpose of observing hand dominance. Only the dominant and non-dominant hand

**CODEBOOK FOR CSSCD FORM NPC**  
**NEUROPSYCHOLOGICAL DATA FORM: CHILD COMPONENT**  
CSSCD INFANT COHORT PATIENTS

---

---

trials of the Purdue Pegboard were to be administered. Trials for both hands and assembly were not a part of this evaluation.

**CODEBOOK FOR CSSCD FORM NPC**  
**NEUROPSYCHOLOGICAL DATA FORM: CHILD COMPONENT**  
CSSCD INFANT COHORT PATIENTS

---

---

- **Scoring and Data Reporting Instructions**

The number of pegs placed in 30 seconds for the dominant and non-dominant hands was to be entered on the NPC form.

- 2 Wechsler Intelligence Scale for Children-Revised Edition (WISC-R ) or Third Edition (WISC-III) (Ages 6.0-15.11 years)

or

Wechsler Adult Intelligence Scale, Revised (WAIS-R) (ages 16.0 years-adult)

The age appropriate version of the Wechsler scale was to be used for each evaluation.

**Note: In Phase 2 of the CSSCD study, the WISC-R was used. After considerable discussion, it was decided that the WISC-III would be used in Phase 3 of the study because (a) the psychometric relationships between the two versions were acceptable for the research question of this study, and (b) the WISC-III was required by many school systems for placement. Thus, use of the WISC-III increased the clinical utility of the evaluation and the potential benefit to participants.**

During Phase 2, the following subscales of the WISC-R were to be administered to all age appropriate subjects: Information, Picture Completion, Similarities, Picture Arrangement, Arithmetic, Block Design, Vocabulary, Object Assembly, Comprehension, Coding, and Digit Span. The Mazes subtest was not to be administered.

During Phase 3, the following subscales of the WISC-III were to be administered to all age appropriate subjects: Information, Picture Completion, Similarities, Picture Arrangement, Arithmetic, Block Design, Vocabulary, Object Assembly, Comprehension, Coding, Symbol Search, and Digit Span. The Mazes subtest was not to be administered.

The following subscales of the WAIS-R were to be administered to all age appropriate subjects:

Information, Picture Completion, Similarities, Picture Arrangement, Arithmetic, Block Design, Vocabulary, Object Assembly, Comprehension, Digit Symbol, and Digit Span.

**NEUROPSYCHOLOGICAL DATA FORM: CHILD COMPONENT**  
CSSCD INFANT COHORT PATIENTS

---

• **Scoring and Data Reporting Instructions**

While variations in administration of these tests sometimes occur for clinical purposes, the administration and scoring instructions were to be followed precisely in CSSCD evaluations.

For the Verbal, Performance, and Full Scale IQ scores, both the sum of scaled scores and the IQ equivalents of sums of scaled scores were to be entered on the NPC form.

For the separate subtests of the WISC-R/WISC-III and WAIS-R, both the child's raw score on the subtest and the scaled score for the raw score corresponding to the child's chronological age were to be entered on the NPC. For instance, a 9-year-old might get 17 correct on the Vocabulary subtest: 17 would then be entered under raw score and 6 under scaled score on the NPC form.

3. Woodcock-Johnson Revised (WJ-R)- Tests of Achievement

The following subtests of the WJR Achievement battery were to be administered:

- i. Broad Reading Cluster: (22) Letter-Word and (23) Passage Comprehension; (31) Word Attack was optional but if administered was not included in the calculation of the Broad Reading Cluster Score.
- ii. Broad Math: (24) Calculation and (25) Applied Problems

Ordering Information:  
Clinical Customer Service Department  
The Riverside Publishing Company  
8420 Bryn Mawr Avenue  
Chicago, IL 60631  
Phone: 1-800-767-8378

• **Scoring and Data Reporting Instructions**

Administration and scoring instructions for the WJ-R are found in Woodcock, R.W. & Mather, N. (1989). Woodcock-Johnson Tests of Achievement: Standard and Supplemental Batteries-Manual. Allen, TX: DLM Teaching Resources.

In an effort to standardize scoring, all WJR tests were to be scored using the WJR-Compuscore Program. All subtests and cluster scores were to be **age-based**. All WJR raw data forms were sent to SCC at NERI for routing to the University of Miami for central scoring. Numerous errors

**CODEBOOK FOR CSSCD FORM NPC**  
**NEUROPSYCHOLOGICAL DATA FORM: CHILD COMPONENT**  
CSSCD INFANT COHORT PATIENTS

---

due to hand scoring were detected during Phase 2 of the study.

Scores to be reported on the NPC included the raw score on each subtest and the age-based standard score for each subtest. The raw score was taken directly from the total number correct on the administration form. **This is not the equivalent of the converted W Score.**

4. Woodcock-Johnson Revised, Tests of Cognitive Ability

The following subtests of the Woodcock-Johnson Revised (WJ-R) Tests of Cognitive ability were to be administered:

Processing Speed Cluster  
    Visual Matching (3)  
    Cross Out (10)  
Short Term Memory Cluster  
    Memory for Sentences (2)  
    Memory for Words (9)  
Analysis/Synthesis (7)  
Spatial Relations (19)

Ordering Information:  
See B.3 above

- **Scoring and Data Reporting Instructions**

See B.3 above

5. Benton Tactile Form Perception Test

The Benton Tactile Form Perception Test was to be administered to all subjects. Complete instructions for administration and scoring are found in:

Benton, A.L., desHamsher, K., Varney, N.R., & Spreen, O. (1983). Contributions to Neuropsychological Assessment (pp. 70-83). New York: Oxford University Press.

Many centers had difficulty obtaining this test. However, it was not an optional test. The neuropsychology battery, nonetheless, was to be administered if this test was unavailable.

Ordering Information:  
Oxford Press  
2001 Evans Road  
Cary, NC 27513  
1-800-451-7556

**NEUROPSYCHOLOGICAL DATA FORM: CHILD COMPONENT**  
CSSCD INFANT COHORT PATIENTS

---

---

The total number of figures correctly identified for the right and left hands were to be entered on the NPC form.

6. Beery Developmental Test of Visual-Motor Integration-Third Revision (VMI-R)

The VMI was to be administered to all age appropriate subjects (ages 6-18) according to the instructions in the test manual.

Ordering Information:  
Psychological Assessment Resources, Inc.  
P.O. Box 998  
Odessa, FL 33556  
Phone: 1-800-331-8378

- **Scoring and Data Reporting Instructions**

Raw and standard scores were to be recorded on the data reporting form. All VMI raw data forms were sent to the SCC at NERI for routing to the University of Miami for central scoring.

## **Clinical Issues**

### **Research vs. Clinical Participation:**

It was to be clearly indicated to parents and physicians that participation in this study was related to research, not clinical service. However, parents and the child's attending physician were to be notified of the results of tests if identified "red flags" occurred, so that, if necessary, additional evaluation and intervention from a clinical perspective, based on a fee-for-service model, could be provided. Therefore, while a detailed evaluation report on the data obtained in this study was not required for each subject, a brief summary of the results were to be provided to the parents and the physician for those children where "red flags" were raised. If further evaluation was necessary, it was considered a clinical service, and handled as appropriate in the child's institution.

### **Red Flags:**

To insure that opportunities for more complete evaluation and/or intervention occurred for children in need of special services, the following "red flags" were used to identify "high risk" children in the study.

a. Potential Mental Retardation

Children with a Full Scale IQ of less than 75 were to be identified for further evaluation.

b, Potential Learning Disability

**CODEBOOK FOR CSSCD FORM NPC**  
**NEUROPSYCHOLOGICAL DATA FORM: CHILD COMPONENT**  
CSSCD INFANT COHORT PATIENTS

---

---

Children who met either of the following criteria were to be identified for further evaluation:

1. Either WJR age-based standard scores (Broad Reading or Broad Math clusters) 15 or more points lower than FSIQ on the WISC-R, WISC-III, or WAIS-R, with no significant difference (> 14 points) between PIQ and VIQ scores.
- or 2. VIQ and PIQ of WISC-R, WISC-III, or WAIS-R differ by > 14 points and age-based standard scores on either of the WJR clusters are 15 or more points less than the higher of either the PIQ or VIQ of the Wechsler Scales.

**B. Data Collection Period: 09/89 – 09/98**

One study was performed after 09/30/98.

**C. Form Versions: E (10/20/89) – Phase 2**

F (10/01/91) – Phase 2

L (06/30/94) – Phase 3

Scores for the Oral Verbal Fluency Test which was administered only during the first part of Phase 2 are included at the end of the codebook and have variable labels ending with '(PH2)'. Scores for this test were not considered reliable and should not be included in analyses of the neuropsychological data.

**D. Files Used to Store Information:**

SAS System File: **NPC\_PUBN.SD2**

Format File: **NPCN.FMT**

**E. Unique Record Identifiers: **ANONID, NPCID2****

Records within the dataset are sorted by **ANONID** and **NPCID2**.

**F. Number of Observations (Patients) in SAS Dataset: 1178 (422)**

The maximum number of studies completed per patient is summarized below.

# of Studies	# of Patients
1	65
2	101
3	117
4	135
5	4

**G. Contents of SAS Dataset:**

CODEBOOK FOR CSSCD FORM NPC  
NEUROPSYCHOLOGICAL DATA FORM: CHILD COMPONENT  
CSSCD INFANT COHORT PATIENTS

---

- Alphabetical Listing of Variables: See pp. 10-14
- Listing of Variables by Position: See pp. 15-19

H. Notes About Selected Variables:

- **NPCID2** – is the follow-up code number identifier which can be used with **ANONID** to link with the corresponding follow-up identifier in datasets that contain other neuropsychological data or MR data – e.g., **NPPID2** in **NPP\_PUBN.SD2** (See Section 2.5) , **MRIID2** in **MRI\_PUBN.SD2** (See Section 2.1), **ACC\_ID2** in **ACC\_PUBN.SD2** (See Section 2.4), etc.

I. Computed Variables:

1. WISC-R/WISC-III/WAIS-R tests were scored locally:

- WISC-R/WISC-III: **NPCSVIQ, NPCIVIQ, NPCSPIQ, NPCIQ, NPCSFSIQ, NPCIFSIQ, NPCRPIC, NPCSPIC, NPCRINFO, NPCSINFO, NPCRCOD, NPCSCOD, NPCRSIM, NPCSSIM, NPCRPARR, NPCSPARR, NPCRARIT, NPCSARIT, NPCRBD, NPCSB, NPCRVOCB, NPCSVOCB, NPCROA, NPCSOA, NPCRDS, NPCSDS**
- WISC-III (Phase 3 only): **NPCSVC, NPCIVC, NPCSPO, NPCIPO, NPCSFD, NPCIFD, NPCSPS, NPCIPS, NPCRSS, NPCSSS**
- WAIS-R: **NPASVIQ, NPAIVIQ, NPASPIQ, NPAIQ, NPASFSIQ, NPAIFSIQ, NPARINFO, NPASINFO, NPARDS, NPASDS, NPARVOCB, NPASVOCB, NPARARIT, NPASARIT, NPARCOMP, NPASCOMP, NPARSIM, NPASSIM, NPARPIC, NPASPIC, NPARPARR, NPASPARR, NPARBD, NPASBD, NPAROA, NPASOA, NPARDSYM, NPASDSYM**

2. Woodcock-Johnson Tests of Achievement and Cognitive Ability were scored centrally at the University of Miami:

- Woodcock-Johnson Tests of Achievement:: **NPCWJARC, NPCWJRLW, NPCWJALW, NPCWJRWA** (optional subtest), **NPCWJRPC, NPCWJAPC, NPCWJAMC, NPCWJRCA, NPCWJACA, NPCWJRAP, NPCWJAAP**
- Woodcock-Johnson Tests of Cognitive Ability (Phase 3 only): **NPCSPEED, NPCRVM, NPCSVM, NPCRCO, NPCSCO, NPCSTMEM, NPCRSENT,**

**CODEBOOK FOR CSSCD FORM NPC**  
**NEUROPSYCHOLOGICAL DATA FORM: CHILD COMPONENT**  
 CSSCD INFANT COHORT PATIENTS

---

**NPCSENT, NPCRWORD, NPCSWORD, NPCRAS, NPCSAS, NPCRSR, NPCSSR**

3. The Beery Developmental Test of Visual-Motor Integration (VMI), administered during Phase 3 only, was scored centrally at the University of Miami:  
**NPCVMIRS, NPCVMISS, NPCVIAY, NPCVMIAM**
4. The Purdue Pegboard test was scored locally: **NPCRPEG, NPCLPEG**
5. The Benton Tactile Form Perception Test was scored locally: **NPCRNCOR, NPCLNCOR**
6. The Oral Verbal Fluency Test, although scored centrally at the University of Miami, is not considered a reliable instrument and should not be included in analyses of the neuropsychological data. **NPCOVANP, NPCOVAC, NPCOVAP, NPCOVFNP, NPCOVFC, NPCOVFP**

J. Inter-Relationship With Other Datasets:

- Other data related to neuropsychological assessment of the child were collected on

Form Abbreviation	SAS Dataset	See Section
ACC	<b>ACC_PUBN.SD2</b>	2.4
