Exclusion Criteria Codes

- 01 Age under 30 or over 69
- 02 Patient does not have COPD
- 03 No symptoms of COPD
- 04 Not ambulatory
- 05 Lives too far away from the medical center
- 06 Is unable to communicate in English
- 07 Treatment with IPPB or CN for >30 continuous days within the past 6 months
- 08 Treatment with oxygen for > 30 continuous days within the past 6 months
- 09 Home IPPB or CN during the 30 day stabilization phase
- 10 Home oxygen therapy during the 30 day stabilization phase
- 11 Propranolol during the 30 day stabilization phase
- 12 Cromolyn sodium during the 30 day stabilization phase
- 13 Cardiomegaly (cardiothoracic ratio > 0.5)
- 14 Radiologic evidence of significant complicating lung disease
- 15 TLC < 80% predicted
- 16 ECG evidence of myocardial infarct
- 17 Creatinine level above 1.8 mg%
- 18 PaO₂ < 55 mmHg and a Hct > 55% or clinical evidence of right ventricular failure
- 19 Cancer
- 20 Evidence of clinical angina pectoris
- 21 Significant valvular heart disease
- 22 Evidence of a significant neuromuscular disorder
- 23 Evidence of active liver disease
- 24 Insulin - dependent diabetes
- 25 Other illness expected to alter the duration of life
- 26 FEV₁ prior to bronchodilator \geq 60% predicted
- 27 FEV₁/FVC prior to bronchodilator \geq 60%
- 28 FEV₁ after bronchodilator \geq 80% predicted
- 29 FEV₁/FVC after bronchodilator \geq 75%
- 30 Quota restriction
- 31 Prebronchodilator FEV₁'s do not agree within either 15% of the higher value or 0.1 L.
- 32
- 33 First and second prebronchodilator FEV₁ and FVC < 7 or > 90 days apart
- 34 Patient is unreliable
- 35 Patient is unwilling
- 36 Other
