-Fill in Event Order, Watch time, and/or Dispatch time for all events that occurred. If an event did not occur, enter "0" for Event Order. -If no documented time exists (from Watch or Dispatch) fill in event order, leave the time fields blank and check the "No Doc Time" box. -Additional Instructions/Documentation

### 1<sup>st</sup> 911 Call received at EMS dispatch:

Call time at Public Safety Answering Point (may be the primary or secondary PSAP) that was responsible for the dispatch of the first responding vehicle. (This first responding vehicle may or may not have the study intervention)

#### 1<sup>st</sup> vehicle dispatch:

This refers to the time when the first responding vehicle was notified by dispatch.

#### Time vehicle w/study fluid arrived:

This refers to the first arriving ground or air transport vehicle that administered study fluid.

#### Time study fluid hung:

This is the time that the study fluid was hung.

#### Resuscitation terminated due to death:

Enter the time if the patient died OR if resuscitation was halted in the field (DNR status discovered, for example).

# 1<sup>st</sup> ED arrival:

The time that the patient arrives at the emergency department or hospital, when the vehicle stops moving.

b. Identify caregiver: Relative Number of hours spent with p		employed caregiver)	)	

# **GOSE Section**

#### 3. Consciousness:

### a. Is the head injured person able to obey simple commands or say any words?

(Anyone who shows ability to obey even simple commands, or utter any words or communicate specifically in any other way is no longer considered to be in a vegetative state. Eye movements are not reliable evidence of meaningful responsiveness. If unclear, corroborate with nursing staff.)

$\bigcirc$	Yes

O No

#### 4. Independence in the home:

#### a. Is the assistance of another person at home essential every day for some activities of daily living?

(For a No, the patient should be able to care for himself at home for 24 hours if necessary. Independence include the ability to plan for and carry out the following activities: bathing, dressing, preparing food, dealing with callers, and handling minor domestic crises. The person should be able to carry out these activities without prompting or reminding and should be capable of being left alone overnight.)

- Yes  $\rightarrow$  complete **items b & c**
- $\bigcirc$  No  $\rightarrow$  complete item c only
- b. Does the patient require frequent help or someone to be around the home most of the time?

(For a No, the patient should be able to care for himself for up to 8 hours a day if necessary.)

- Yes
- 🔘 No

#### c. Was assistance at home required before the injury?

- O Yes
- O No

Version 1.03.00 Date: 03/25/2008 Page 2 of 5

Date (mm/dd/yyyy)           /         /	Time call received at dispatch (24hr clock)         :

# 5. Independence outside the home

# a. <u>Shopping:</u>

(This includes being able to plan what to buy, take care of money independently and behave appropriately in public.)

- i. Can the patient shop without assistance?
  - Yes
  - 🔘 No

# ii. Was the patient able to shop without assistance prior to the injury?

- O Yes
- 🔘 No

# b. <u>Travel:</u>

(This includes either driving or use of public transit. Ability to use a taxi is sufficient, provided the person can call for the taxi and instruct the driver independently.)

# i. Is the patient able to travel locally without assistance?

- Yes
- O No

# ii. Was the patient able to travel without assistance prior to the injury?

- 🔵 Yes
- 🔵 No

### c. <u>Work:</u>

(If patients were working before, then their current capacity for work should be at the same level. If they were seeking work before, then the injury should not have adversely affected their chance of obtaining work at the level to which they were eligible. If the patient was a student before the injury, then their capacity for study should not have been adversely affected.)

### i. Is the patient working at his/her previous capacity?

- $\bigcirc$  Yes  $\rightarrow$  complete item iii only
- $\bigcirc$  No  $\rightarrow$  complete items ii and iii
- ii. How restricted are they?
  - Reduced work capacity
  - Able to work only in a sheltered workshop or non-competitive job
  - Unable to work at all

# iii. Prior to injury was the patient?

Working full-time, list occupation: (30)
Working part-time, list occupation: (30)
Seeking employment
Student, level of education: (30)
Homemaker
Retired
Unable to work

HS ID:	Site Linking ID (optional)	Incident Number (optional)	

# 6. Social & Leisure activities:

(They need not have resumed all their previous leisure activities, but should not be prevented by physical or mental impairment. If they have stopped the majority of activities because of loss of interest or motivation then this is also considered a disability.)

- a. Is the patient able to resume regular social and leisure activities outside the home?
  - $\bigcirc$  Yes  $\rightarrow$  complete **item c** only
  - $\bigcirc$  No  $\rightarrow$  complete items b and c
- b. What is the extent of restriction on their social and leisure activities?
  - Participate a bit less (at least half as often as before injury)
  - Participate much less (less than half as often)
  - Unable to participate (rarely, if ever, take apart)
- c. Did the patient engage in regular social and leisure activities outside the home before the injury?
  - O Yes
  - 🔘 No

# 7. Family & Friendships:

(Typical post-traumatic personality changes: quick temper, irritability, anxiety, insensitivity to others, mood swings, depression, and unreasonable childish behavior.)

- a. Have there been psychological problems which have resulted in ongoing family disruption or disruption to friendships?
  - $\bigcirc$  Yes  $\rightarrow$  complete items b and c
  - No  $\rightarrow$  complete **item c** only
- b. What has been the extent of the disruption or strain?
  - Occasional (less than weekly)
  - Frequent (once a week or more, but tolerable)
  - Constant (daily and intolerable)

# c. Were there problems with family or friends before the injury?

(If there were some problems, but the problems have become markedly worse since the injury then the answer should be NO) Yes

O No

# 8. Return to normal life:

(Other typical problems reported after head injury include: headaches, dizziness, tiredness, sensitivity to noise/light, slowness, memory failures, and concentration problems.)

# a. Are there any other current problems relating to the injury that affect daily life?

- O Yes
- O No

# b. Were there similar problems present before the injury?

- 🔘 Yes
- 🔵 No

# **TBI Outcome Interview**

Version 1.03.00 Date: 03/25/2008 Page 4 of 5

Date (mm/dd/yyyy)	Time call received at dispatch (24hr clock)       (hh:mm:ss)       Estime         :       :       (hh:mm:ss)       Estime	nated O From dispatch
HS ID:	Site Linking ID (optional)	Incident Number (optional)

# 9. What do you feel has had the greatest impact on outcome following this injury?

- Effects of the head injury
- $igodoldsymbol{igo$
- A combination of these

# DRS Section

# 10. Level of consciousness:

# a. Does the patient open eyes?

- U Spontaneous (eyes open with sleep/wake rhythms indicating active arousal mechanisms, does not assume awareness.)
- **To speech** (a response to any verbal approach, whether spoken or shouted, not necessarily the command to open the eyes. Also, response to touch, mild pressure.)
- To pain (tested by a painful stimulus.)
- None (no eye opening even to painful stimulation.)

# b. Communication ability:

- Oriented (implies awareness of self and the environment. Patient able to tell you a) who he is; b) where he is; c) why he is there; d) year; e) season; f) month; g) day; h) time of day.)
- Confused but conversant (attention can be held and patient responds to questions but responses are delayed and/or indicate varying degrees of disorientation and confusion.)
- Inappropriate (intelligible articulation but speech is used only in an exclamatory or random way (such as shouting and swearing); no sustained communication exchange is possible.)
- $\bigcirc$  Incomprehensible (moaning, groaning or sounds without recognizable words, no consistent communication signs.)
- **None** (no sounds or communications signs from patient.)

# c. What is the patient's best motor response?

- **Obeys commands** (obeying command to move finger on best side. If no response or not suitable try another command such as "move lips", "blink eyes", etc. Do not include grasp or other reflex responses.)
- Localizes to pain (a painful stimulus at more than one site causes limb to move (even slightly) in an attempt to remove it. It is a deliberate motor act to move away from or remove the source of noxious stimulation. If there is doubt as to whether withdrawal or localization has occurred after 3 or 4 painful stimulation, rate as localization.)
- Withdraws from pain (any generalized movement away from a noxious stimulus that is more than a simple reflex response.)
- Flexor posturing (painful stimulation results in either flexion at the elbow, rapid withdrawal with abduction of the shoulder or a slow withdrawal with adduction of the shoulder. If there is confusion between flexing and withdrawing, then use pinprick on hands.)
- $\bigcirc$  Extensor posturing (painful stimulation results in extension of the limb.)
- **None** (no response can be elicited. Usually associated with hypotonia. Exclude spinal transection as an explanation of lack of response; be satisfied that an adequate stimulus has been applied.)
