WOMEN'S HEALTH INITIATIVE

Form 32 - Family History Questionnaire

We can learn about risks of disease by asking women what diseases have run in their families. This questionnaire asks you about several diseases that may occur in more than one member of a family. For all of these questions, please think about full-blooded relatives only. Do not think about half-sisters or half-brothers, or relatives who are related to you by marriage or adoption. Full-blooded sisters and brothers are those who had the same two parents as you. If you are adopted or are not sure about some relatives' health history, please include any family history that you know about.

MARKING INSTRUCTIONS

Please note:

- A small serving is about one-half (1/2) the medium serving size, or less.
- A large serving is about one-and-a-half (1 1/2) times the medium serving size, or more.
- If you never ate a food, mark "Never or less than once per month," and omit the serving size altogether.
- Please *do not skip* any foods.

Algorithm for Enzyme Diagnostic Criteria

		Interpretation	
Cardiac Enzyme	**Abnormal***	**Equivocal**	**Normal**
Creatine kinase MB fraction (CK-MB)	≥ 2x ULN (as %, index, or units); or "present" without quantification	1-2x ULN (as %, index, or units); or "weakly present"	WNL
Toponin (C, I, or T)**	Troponin ≥ 2x ULN	Troponin 1-2x ULN	Troponin is WNL
Total creatine kinase (CK) (no MB available)	N/A	Total CK ≥ 2x ULN	Total CK is 1-2x ULN or WNL

ULN = upper limit of normal
WNL = within normal limits

* If both CK-MB and Troponin are available, Troponin must be elevated to be considered abnormal, if only CK-MB is available, abnormal levels are enough to code enzymes as abnormal, i.e., WHI considers Troponin as the most accurate indicator of myocardial injury.

** Code Troponin levels using the ULN and not Upper limit of undeterminate/indecisive as the reference value. Thus, if 2 cut points are given, choose the lower cut point for the ULN.
